

A New Type of Advanced Clinic

Althing is expanding rural access and ensuring health services can be equally provided to all, more conveniently and with modern methods and solutions.

Available 24/7

Althing services are available to access anytime. Using the Portable Qualified Health Services, patients can 'pick up' or call for delivery of a system with sensors.

Once engaged on the Portable Clinic a roster of specialists is available to patients and ready to provide a full encounter without delay.

High Tech Self Service

When patients enter the clinic they have immediate, no wait, access to their providers and service. All patients begin by enabling and authoring their own chart. Patients may choose to enter the High Tech self serve MedBays where the most effective sensors advance their care, aided by providers in realtime. Through this process a patient may receive diagnosis, care plan and medications or if necessary the patient is referred to an onsite provider for further evaluation.

Take Out Health

Patients, any time of the day, may enter the clinic and check out a care system with sensors. Alternately patients may call for delivery of a Portable Qualified Health System. Althing providers are available through the Phrazier/Kitsune platform 24/7 to assist.
